1

In the 1991 Census the number of women by parity was not published if the number in a given birth cohort and parity category was lower than 4. Therefore, some figures for birth cohorts 1975-1966 and for women at parities 2-6+ are substituted by the code for missing value “.”

2

The distribution of women by the number of live-born children was recalculated from Census date to 1st January of given year (1991 or 2001) using the exact numbers of live-born children by birth order, age of mother and day of birth between 1st January and Census date.

3

In year 1957, one birth was moved from age 11 to age 12 (Lexis=VV), to conform to other sources (Observatoire démographique européen and Eurostat) and to correspond to numbers of births by different format (Lexis=RR).

4

In year 1963, two births were moved from age 12 to age 10 (Lexis=RR) to conform to other source (Die Natürliche Bevölkerungsbewegung im Jahre 1963, Österreichisches Statistisches Zentralamt, Wien 1964).

5

Data by Lexis triangles for 1951-1983 were recalculated combining the data by Lexis vertical parallelograms (sources 3 and 4) with data by Lexis squares (source 5).
