FEMALE POPULATION: Exposure by age and year of birth

1956-2013: The female exposure population by calendar year, age, and year of birth (Lexis triangles) is estimated according to the methods protocol of the Human Mortality Database (HMD), available at <http://www.mortality.org> by using data on population size, deaths and live births by year and sex provided by the Federal Statistical Office of Germany (Statistisches Bundesamt) [1946-1989: West Germany with West Berlin; 1990-2013 Western Germany without Berlin-West]. For the period 1988-2011 an inter-censal adjustment of the published population estimates has been applied (see Appendix 2 of the Background and Documentation file for Germany of the Human Mortality Database for details).
