### **FEMALE POPULATION: Distribution by age and parity**

1991: Statistics Canada. Custom tabulations of females 15 years and over by single years of age, marital status and by number of children ever born alive for Canada and provinces from the 1991 population census, file BO-0380. (CD-ROM received on 01.04.2010). (RefCode 5)

### **FEMALE POPULATION: Exposure by age and year of birth**

1991-2018: Female exposure population by calendar year, age, and year of birth (Lexis triangles) is estimated using data on population size and deaths from the Human Mortality Database, which is available at <http://www.mortality.org> or <http://www.humanmortality.de>.

For the period before 1991, the territorial coverage of the HMD and the HFD data differ, and HFD female exposure population was therefore calculated using population and death counts by provinces and territories of Canada provided by the Canadian Human Mortality Database (<http://www.bdlc.umontreal.ca/chmd/index.htm>).
